

Separate type digital torque driver

WDISR-RL series

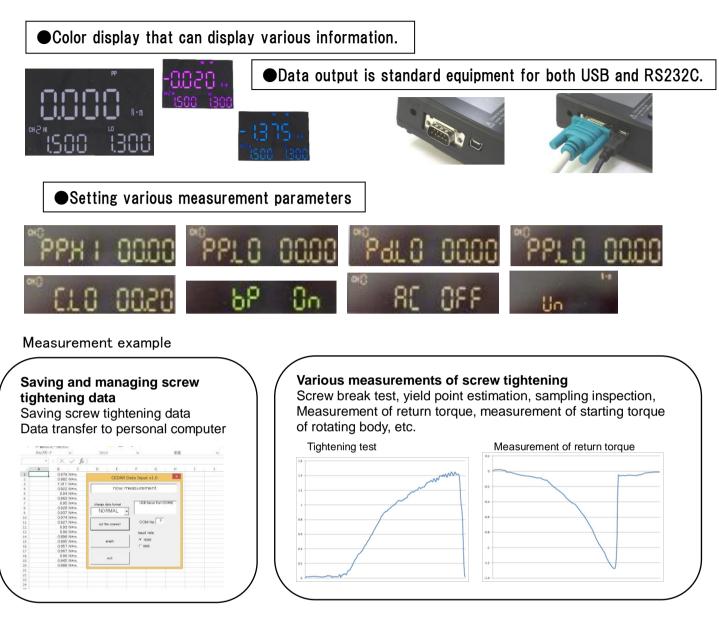

The detector is small and lightweight. For managing small torque. Since it is a built-in battery type, it can be used for a wider range of purposes.

It works with a personal computer or PLC to manage torque measurement more highly.

A color display that can display various information. Data output is standard equipment for both USB and RS232C. Numerical values such as pass / fail conditions can be set up to 10 channels. The pass / fail judgment is displayed in color for easy understanding. Built-in battery drive.

Works with "PC" and "PLC"

Various commands can be input from PLC or personal computer. Finer torque management is possible with external control.

Command list

Clear signal: Clears the display and outputs the held numerical value as data and saves it in memory.

Measurement mode: Change the measurement mode.

Measurement channel: Change individual channels for which conditions such as pass / fail judgment are set.

Peak hold upper limit : Change the pass / fail judgment upper limit of the current channel. **Peak hold lower limit:** Change the pass / fail judgment lower limit of the current channel. **Peak down lower limit:** Change the peak down judgment start lower limit of the current channel.

Real-time output lower limit: Changed the output lower limit of real-time output. **Auto clear time:** Changed the time to automatically clear after the measurement is completed.

Buzzer notification: Changed the buzzer notification method.

WDISR -RL series Specification

WDISR-RL005	WDISR-RL05		WDISR-RL6	WDISR-RL10		
It is a torque measuring	equipment to measure the tighte		htening torque and loosenin	g torque of screws.		
Internal battery (12 hours continuous operation time, 3 hours charging time)						
12V DC	-					
0.20 ~ 50.00 [mN-m] (Note 1)	2.0 ~ 500.0 [mN-m]			0.020 ~ 6.000 [N-m]	0.20 ~ 10.00 [N-m]	
gf-cm / ozf-in / mN-m / cN-m	kgf-	kgf-cm / lbf-in / mN-m / cN-m		kgf-cm / lbf-in / N-m / cN-m		
±2.0%±0.3mN-m	N-m ±0.5% (If 499 digit or less, ±3 digit.)					
*Maintain a constant temperature during measurement.						
1000 data / 1sec	1000 data / 1sec					
Measurement mode		Data output				
		0		Measure the peak torque.		
Peak down	PD	0				
Real time output	С	0	The data output cycle is approximately 180 data / 1 second.			
Track	TR	-	Mainly used for calibration.			
If the measurement mode is TR, the data isn't outputted.						
Wired (ASCII format)						
800 data						
Power off after 10 minutes of non-use Refer to "5.3. Auto Power Off Setting" for how to cancel the power off.						
Detector (Refer below)						
Detector cable						
				Plus bit #1, #2		
			Bit holder			
#0, #1 One way bit holder						
-					Auxiliary handlex2	
Rubber foot						
Result of calibration, Certification on calibration, Traceability system figure

Note 1 WDISR-RL005 measurements are in 0.05 mN-m increments.

Detector

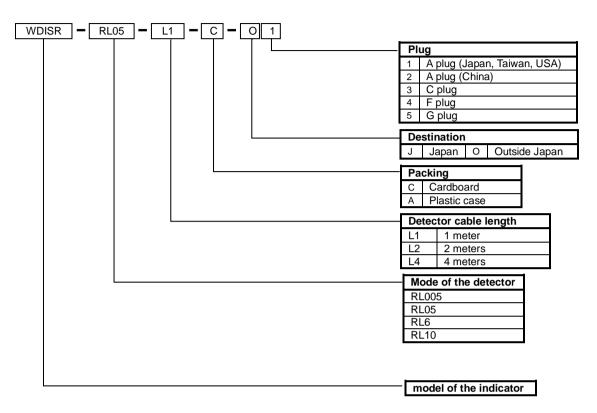

Model	RL005 / 05	RL6 / 10	
Shapes (Unit: mm)			
Socket	Ф4 (HIOS shank)	6.35sq (Square drive)	

CEDAR

Ordering number

The order number indicates the model of the indicator followed by the 'model of the detector', 'detector cable length', 'Packing', 'destination' and 'AC adapter plug'.

About the AC adapter

The certification mark differs depending on the specified plug.

Plug	certification
A plug (Japan, Taiwan, USA) A plug (China) C plug	PSE、FCC、CCC、BSMI、CE
F plug G plug	PSE、CE、UKCA、KC

Packing

The specifications of the case are shown below.

Packing	-C	-A
Specifications	Cardboard	РР
